Greek Defence News

The conference brought together international C4I solutions and systems' developers and providers, along with the Hellenic Defence Industry executives as well as representatives from the Hellenic Ministry of Defence and the Hellenic National Defence, Army, Navy, Air Force General Staffs, focused on digital battlefield transformation for achieving multi-domain interoperability and enhancing capabilities in command and control, communications, cyber and EW operations, through active and passive surveillance sensors, unmanned systems, networks and geospatial intelligence.

Command, Control, Communications, Computers, Intelligence (C4I) and cybersecurity systems are all critical for the modern warfare. These systems combine a variety of technologies including command, control, communications, computers, intelligence, sensors, Internet of Things (IoT), remote control and autonomous systems that decision-makers rely upon to supply and process accurate analytical data, as well as collect and display information in the timeliest, context-appropriate and format-suitable manner, using smart technologies and state-of-the-art sensors.

During the two days C4ISR conference, highly qualified speakers from participating companies presented the following topics:

1. Elbit Systems

(i) Advance Airborne Self Protection EW Solutions.

(ii) Multi Domain Network combat Solutions.

2. AVANTIX

Flash Hawk: the Airborne Next Generation V/UHF Ground Emitter Location System.

3. HENSOLDT

- (i) PCL-Passive Coherent Localization.
- (ii) Coastal Surveillance System.

4. SKYTALYS

Kill Chain in Joint all-domain operations.

5. INTRACOM DEFENSE

- (i) LOTUS – Next Generation Tactical Remotely Piloted Aircraft System with increased survivability.

(ii) Secure and Resilient Broadband Wireless Communications as a key enabler of network-centric Warfare.

6. Aeronautics

Evolved Advanced Small Tactical Capabilities.

7. UVISION

Loitering Munitions – Battlefield Game-changer.

8. HASTIG

C4ISR Systems and the capabilities of the Hellenic Defense Industry in the field.

9. Swarmly

Poseidon line of VTOL UAS, review from the experience gained during the Russia –Ukraine war.

10. Taccon Hellas & Partners

Airspace Situational Awareness – Open Architecture Platform for Unmanned Systems (UAS, UUS, USV) operators, Beyond Visual Line of sight (BVLOS).

Participants: 270

Hellenic National Defence/Army/Navy/ Air Force General Staffs and Security Services, Foreign Military Delegations, Defence Attaché: 71
