# 4th C4ISR ATHENS INTERNATIONAL CONFERENCE

Athens, Greece, 28-29 September 2022, War Museum

DBDC International Defence Publications & Events LTD and the GREEK DEFENCE NEWS magazine are pleased to announce the **4th C4ISR ATHENS INTERNATIONAL CONFERENCE**, to be held in Athens, Greece, 28-29 September 2022, War Museum.

The 4th C4ISR ATHENS INTERNATIONAL CONFERENCE will be organized as the premier event supported by the relevant Greek Authorities for knowledge exchange, tapping into the latest technical developments in C4ISR.

Today's interconnected battlespaces require new technologies. Top military, government and industry leaders join together for a live online event about strategies to connect forces and win conflicts with emerging data and communications tools. The conference will explore the latest developments for joint war fighting, command and control, cyber, space, artificial intelligence, unmanned systems and sensors, networks and geospatial intelligence.

Command, Control, Communications, Computers, Intelligence (C4I) and cybersecurity systems are all critical for warfare. These systems combine a variety of technologies including command, control, communications, computers, intelligence, sensors, Internet of Things (IoT), remote control and autonomous systems that decision-makers rely upon to supply and process accurate analytical data, as well as collect and display information in the most timely, context-appropriate and format-suitable manner, using smart technologies and state-of-the-art sensors.

C4I and cybersecurity are mainly useful for complex and integrated military and security apparatuses that bring together and manage a wide array of integrated ground, maritime, air and cyber forces, in addition to general security, coast guards, civil defense, and crisis management organizations. Furthermore, these systems enable senior commanders to plan, manage, and follow through operations at the toughest of times and under the harshest of circumstances such as wars, disasters and emergencies.

The conference will bring together international C4I solutions and systems' developers and providers, IT and telecom companies, energy, other industries along with the Hellenic Defence Industry executives as well as representatives from the Hellenic Ministry of Defence and the Defence, Army, Navy, Air Force General Staffs, focuses on new strategies and capabilities in mobility, command and control, communications, cyber, unmanned systems and sensors, networks and geospatial intelligence

## Topics to be discussed:

- Artificial Intelligence
- Unmanned aerial systems, intelligence, reconnaissance and surveillance: Powering military operations and informing decision-making
- Satellite communications
- Battlefield networks

- C4ISR for Naval Operations
- Unmanned land systems
- Unmanned aerial Systems
- Responsive C4ISR capability meeting the full spectrum of the Hellenic Air Force operational demands
- International cooperation in C4ISR systems
- Multi-UAV Mission Planning for Monitoring Critical Infrastructures
- Unmanned combat aerial vehicles
- Considering Failures and Cyberattacks
- The New Tools of Electronic Warfare
- The Latest Communication Technology for Soldiers
- C4ISR in Homeland Security
- Night Vision and Thermal images sensors to enable surveillance and situational awareness

The conference will also feature a display area of the latest technologies and solutions offered by international defence industries in the areas of C4ISR.

VIPs Conference attendees have been invited and are expected to be senior officials from the Hellenic MOD, General Armaments Directorate, Senior Officers from the Defence/Army/Navy/Air Force General Staffs, Hellenic Police, Hellenic Coast Guard, Hellenic Fire Brigade as well as Senior Representatives from the Hellenic and the International Defence Industry.
